# Custom Monopoly Game

# Project Background

This project involved designing a fully customized Monopoly game for my client Ryan, created for Tuddy Designs Studio. The goal was to develop a cohesive and visually engaging game experience while maintaining the classic Monopoly feel with a unique custom identity.

The scope of work covered the complete visual design of the game, including the board layout, property and action cards (front and back), deal cards, and custom currency design. Special attention was given to consistency, readability, and thematic alignment across all components to ensure a polished and immersive final product.

This project showcases my ability to handle end-to-end design systems, from concept to final execution, while delivering a professional and production-ready result.
